DISCLAIMER

Please Read Carefully:

Realtek Semiconductor Corp., (Realtek) reserves the right to make corrections, enhancements, improvements and other changes to its products and services. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

Reproduction of significant portions in Realtek data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Realtek is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions.

Buyers and others who are developing systems that incorporate Realtek products (collectively, "Customers") understand and agree that Customers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Customers have full and exclusive responsibility to assure the safety of Customers' applications and compliance of their applications (and of all Realtek products used in or for Customers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Customer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Customer agrees that prior to using or distributing any applications that include Realtek products, Customer will thoroughly test such applications and the functionality of such Realtek products as used in such applications.

Realtek's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation kits, (collectively, "Resources") are intended to assist designers who are developing applications that incorporate Realtek products; by downloading, accessing or using Realtek's Resources in any way, Customer (individually or, if Customer is acting on behalf of a company, Customer's company) agrees to use any particular Realtek Resources solely for this purpose and subject to the terms of this Notice.

Realtek's provision of Realtek Resources does not expand or otherwise alter Realtek's applicable published warranties or warranty disclaimers for Realtek's products, and no additional obligations or liabilities arise from Realtek providing such Realtek Resources. Realtek reserves the right to make corrections, enhancements, improvements and other changes to its Realtek Resources. Realtek has not conducted any testing other than that specifically described in the published documentation for a particular Realtek Resource.

Customer is authorized to use, copy and modify any individual Realtek Resource only in connection with the development of applications that include the Realtek product(s) identified in such Realtek Resource. No other license, express or implied, by estoppel or otherwise to any other Realtek intellectual property right, and no license to any technology or intellectual property right of Realtek or any third party is granted herein, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which Realtek products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of Realtek Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from Realtek under the patents or other Realtek's intellectual property.

Realtek's Resources are provided "as is" and with all faults. Realtek disclaims all other warranties or representations, express or implied, regarding resources or use thereof, including but not limited to accuracy or completeness, title, any epidemic failure warranty and any implied warranties of merchantability, fitness for a particular purpose, and non-infringement of any third party intellectual property rights.

Realtek shall not be liable for and shall not defend or indemnify Customer against any claim, including but not limited to any infringement claim that related to or is based on any combination of products even if described in Realtek Resources or otherwise. In no event shall Realtek be liable for any actual, direct, special, collateral, indirect, punitive, incidental, consequential or exemplary damages in connection with or arising out of Realtek's Resources or use thereof, and regardless of whether Realtek has been advised of the possibility of such damages. Realtek is not responsible for any failure to meet such industry standard requirements.

Where Realtek specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Customers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any Realtek products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death. Such equipment includes, without limitation, all medical devices identified by the U.S.FDA as Class III devices and equivalent classifications outside the U.S.

Customers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Customers' own risk. Customers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Customer will fully indemnify Realtek and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.

TRADEMARKS

Realtek is a trademark of Realtek Semiconductor Corporation. Other names mentioned in this document are trademarks/registered trademarks of their respective owners.

USING THIS DOCUMENT

Though every effort has been made to ensure that this document is current and accurate, more information may have become available subsequent to the production of this guide.

1   What Can We Get in this Tutorial

AmebaPro can upload the image to AWS S3 cloud storage, then trigger a AI image processing function to do object detection! Here, we have some application scenario introduced: 1.1 wild animal, 1.2 vehicle, 1.3 food, 1.4 retail product.

1.1   Wild Animal Detection

Uploaded image	Rekognition results (AWS AI)
	Label: Lion, Confidence: 99.99998474121094 Label: Wildlife, Confidence: 99.99998474121094 Label: Mammal, Confidence: 99.99998474121094 Label: Animal, Confidence: 99.99998474121094
	Label: Zebra, Confidence: 98.60205841064453 Label: Animal, Confidence: 98.60205841064453 Label: Mammal, Confidence: 98.60205841064453 Label: Wildlife, Confidence: 98.60205841064453
	Label: Elephant, Confidence: 99.82683563232422 Label: Mammal, Confidence: 99.82683563232422 Label: Animal, Confidence: 99.82683563232422 Label: Wildlife, Confidence: 99.82683563232422

1.2 Vehicle Detection

Uploaded image	Rekognition results (AWS AI)
	Label: Car, Confidence: 99.77043914794922 Label: Vehicle, Confidence: 99.77043914794922 Label: Transportation, Confidence: 99.77043914794922 Label: Road, Confidence: 96.77059173583984 Label: Traffic Jam, Confidence: 88.41131591796875 Label: Truck, Confidence: 87.05320739746094 Label: Person, Confidence: 83.31153869628906 Label: License Plate, Confidence: 75.08149719238281 Label: Freeway, Confidence: 66.02681732177734 Label: Highway, Confidence: 59.900604248046875
	Label: Person, Confidence: 99.8815689086914 Label: Car, Confidence: 99.66630554199219 Label: Transportation, Confidence: 99.66630554199219 Label: Vehicle, Confidence: 99.66630554199219 Label: Traffic Light, Confidence: 93.42364501953125 Label: Light, Confidence: 93.42364501953125 Label: Taxi, Confidence: 87.03340148925781 Label: Road, Confidence: 80.97848510742188 Label: Pedestrian, Confidence: 71.65261840820312

1.3 Food Detection

2   Set Up AmebaPro to Upload the File to S3

Please follow the steps in the following to set up your device.

2.1   Download the Project for FreeRTOS v202012-LTS

This tutorial is based on **Amazon-v202012-LTS** framework, we can clone the project from Github recursively.
source link: https://github.com/ambiot/ambpro1_sdk

Run the command to download the whole project:

> **$ git clone --recurse-submodules https://github.com/ambiot/ambpro1_sdk.git**

If you already have a checkout, run the following command to sync submodules recursively:

> **$ git submodule update --init --recursive**

If there is GCC makefile error like: "No rule to make target …", it may mean that some codes have not been downloaded correctly. Please run the above command again to download the missing codes.

2.2   Configure the AWS Credential File

Configure **aws_clientcredential.h** and **aws_clientcredential_keys.h**
Refer to https://docs.aws.amazon.com/freertos/latest/userguide/freertos-configure.html, which will have the instructions.

In **aws_clientcredential.h**(lib_amazon/amazon-freertos-202012.00/demos/include), set network connection related info

> **#define clientcredentialWIFI_SSID   "SSID"**
> **#define clientcredentialWIFI_PASSWORD   "PASSWORD"**

In **aws_clientcredential_keys.h**(lib_amazon/amazon-freertos-202012.00/demos/include), set Demo required credentials

> **#define keyCLIENT_CERTIFICATE_PEM   "CERTIFICATE"**
> **#define keyCLIENT_PRIVATE_KEY_PEM   "PRIVATE_KEY"**

2.3   Enable the Demo for S3 File Upload

define the **CONFIG_CORE_HTTP_S3_UPLOAD_DEMO_ENABLED** in **aws_demo_config.h**(lib_amazon/amazon-freertos-202012.00/vendors /realtek/boards/amebaPro/aws_demos/config_files)

> **//#define CONFIG_CORE_MQTT_MUTUAL_AUTH_DEMO_ENABLED**
> **//#define CONFIG_OTA_UPDATE_DEMO_ENABLED**
> **//#define CONFIG_DEVICE_SHADOW_DEMO_ENABLED**
> **#define CONFIG_CORE_HTTP_S3_UPLOAD_DEMO_ENABLED**
> **//#define CONFIG_CORE_HTTP_MUTUAL_AUTH_DEMO_ENABLED**

2.4　　Take a Snapshot Image Used to Upload to S3

For the image data used to upload, we can use a snapshot taken by camera sensor. The sample code can be found in "component/common/application/amazon/JPEG_snapshot_s3_upload_example/http_demo_s3_upload.c".

Before running this demo, make sure the correct camera model is selected in "project/realtek_amebapro_v0_example/inc/sensor.h"

```
#define ISP_AUTO_SEL_DISABLE 0X00
#define ISP_AUTO_SEL_ENABLE  0X01

#define SENSOR_USE           SENSOR_SC2232
#define SENSOR_AUTO_SEL      ISP_AUTO_SEL_ENABLE //Enalbe Auto select
#if SENSOR_AUTO_SEL == 0X01 && SENSOR_USE == SENSOR_ALL
```

The following code is used to introduce how AmebaPro take a snapshot:

```
/*** snapshot on AmebaPro ***/

/* Enable IR-cut of camera seneor */
#if CONFIG_LIGHT_SENSOR
   init_sensor_service();
#else
   ir_cut_init(NULL);
   ir_cut_enable(1);
#endif

/* Configure the setting of snapshot function */
#if ENABLE_SNAPSHOT
   snapshot_setting();
#endif

snapshot_data = NULL;
snapshot_data_len = 0;

/* take a snapshot and store in a buffer */
if ( jpeg_snapshot_isp() < 0)
     printf("take snapshot (from isp) FAIL\n\r");

/* get the JPEG snapshot data from the buffer */
int timeout_ms = 100;
while (1)
{
     if(jpeg_snapshot_get_buffer(&video_buf, timeout_ms))
     {
         jpeg_snapshot_set_processing(1);
         snapshot_data = video_buf.output_buffer;
         snapshot_data_len = video_buf.output_size;
         jpeg_snapshot_set_processing(0);
         break;
     }
}
```

2.5　　Make Pre-signed URL for upload file to S3

refer to the **README.md** in (lib_amazon\amazon-freertos-202012.00 \demos\common\http_demo_helpers\presigned_url_generator)
use **presigned_urls_gen.py** to generate the URL, then paste the URL to "**http_demo_s3_upload.c**"

```
/* Check that the pre-signed GET URL is defined. */
#ifndef democonfigS3_PRESIGNED_GET_URL
    #define democonfigS3_PRESIGNED_GET_URL    "https://XXXXXX.s3.amazonaws.com/XXX.png?XXXXXX..."
#endif

/* Check that the pre-signed PUT URL is defined. */
#ifndef democonfigS3_PRESIGNED_PUT_URL
    #define democonfigS3_PRESIGNED_PUT_URL    "https://XXXXXX.s3.amazonaws.com/XXX.png?XXXXXX..."
#endif
```

2.6   Build the Project and Download the Image to AmebaPro

Build the project and download the image to AmebaPro.

Build the project in GCC:
   $ make all

If success, the image file(**flash_is.bin**) will be generated in (project\realtek_amebapro_v0_example\GCC-RELEASE\application_is)
Then, we can use the **image tool**(tools\AmebaPro\Image_Tool\ImageTool.exe) to download the image to AmebaPro.

Note: For using the image tool, please see application note:
https://github.com/ambiot/ambpro1_sdk/blob/main/doc/AN0300%20Realtek%20AmebaPro%20application%20note.en.pdf

After downloading the image to device, please reboot AmebaPro to run the demo. The snapshot image will then be uploaded to your S3 bucket!
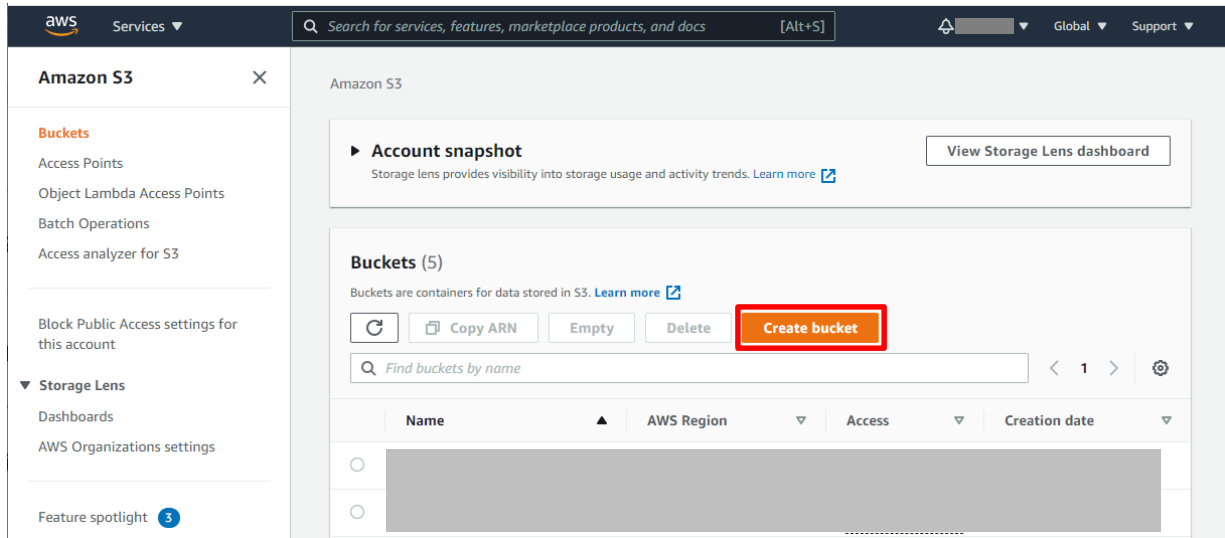

3 Real-time File Processing with Rekognition

After setting up the AmebaPro, we can do the real-time image processing on AWS website.
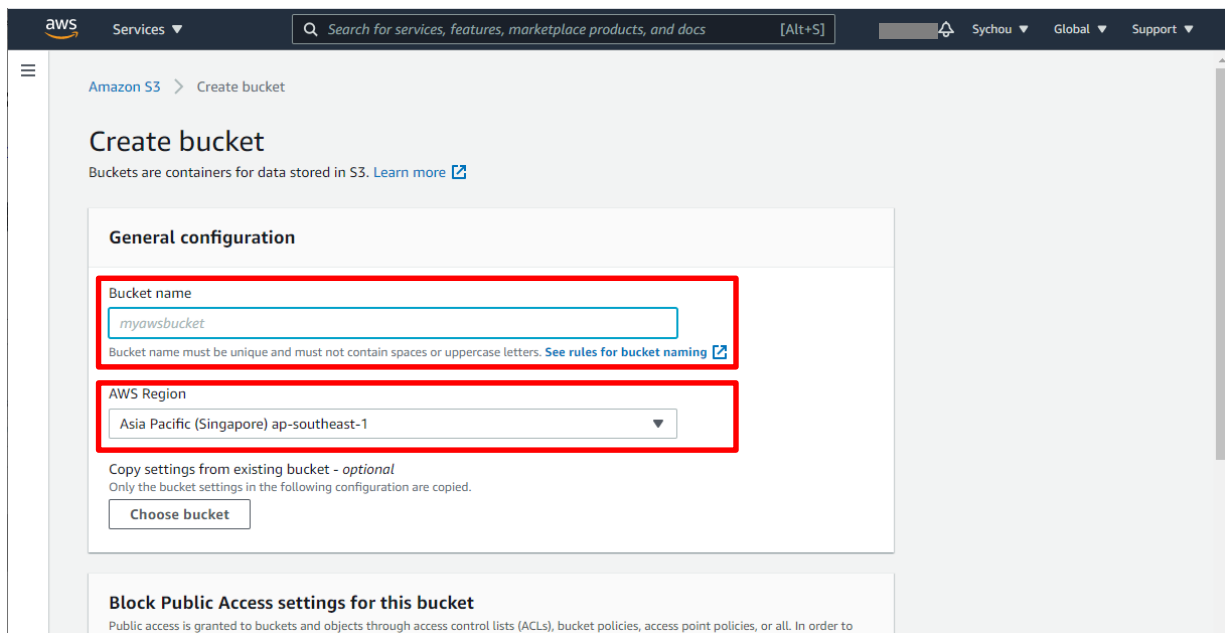

3.1 Create an Amazon S3 bucket Using the Console

Go to Amazon S3 console: https://console.aws.amazon.com/s3/home
Create a bucket by choosing **Create bucket**

For Bucket name, enter a **unique name**.
For AWS Region, choose a **Region**. Note that you must create your Lambda function in the same Region.

After creating the bucket, you can see the list of buckets in your account in the current Region.

3.2   Create an AWS Lambda function to Trigger the Rekognition Service

We can refer https://docs.aws.amazon.com/lambda/latest/dg/with-s3-example.html to create a Lambda function easily.

Go to Functions page on the Lambda console: https://console.aws.amazon.com/lambda/home#/functions
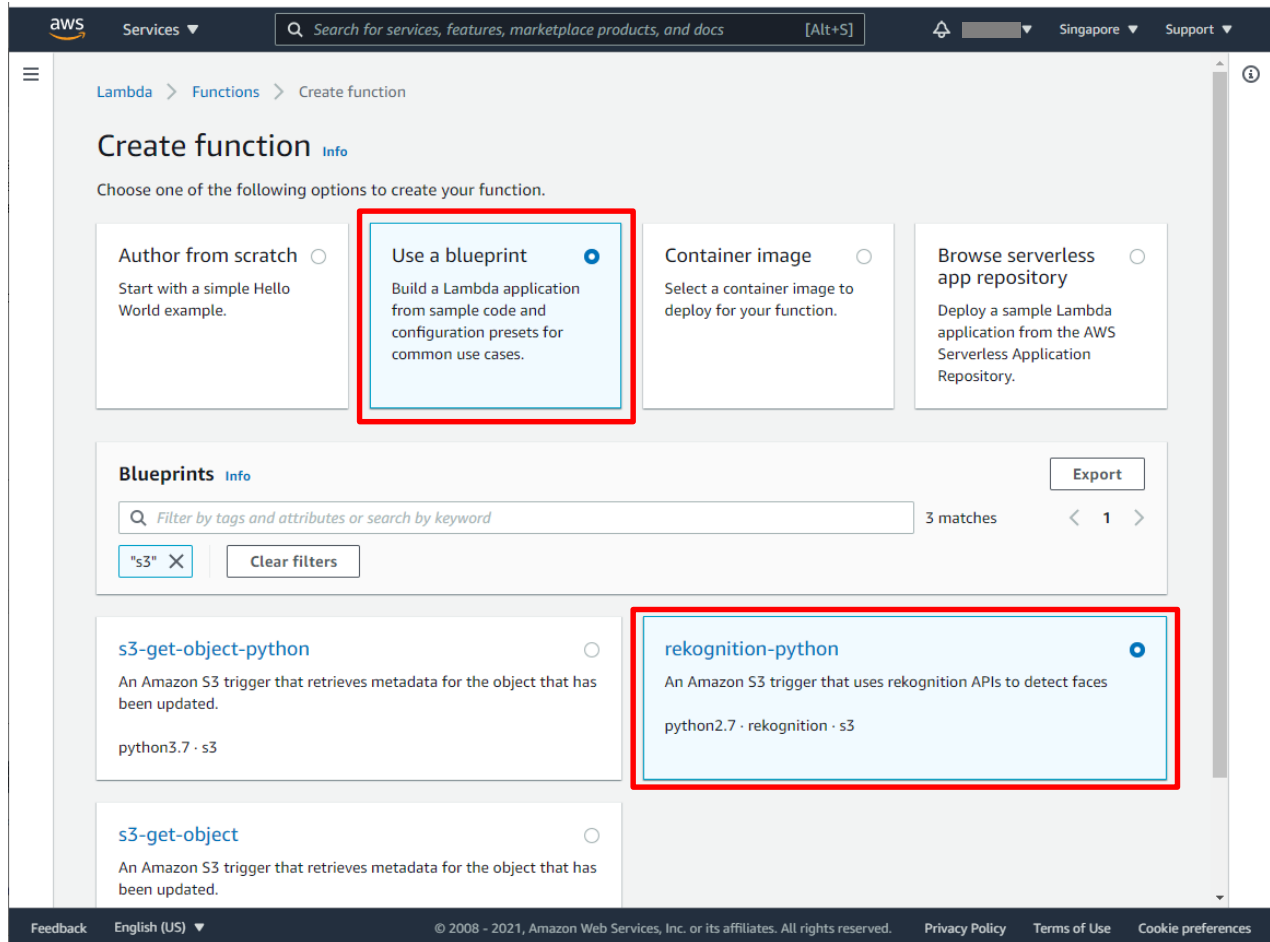

Choose **Create function**

On the Create function page, choose **Use a blueprint**.
Under Blueprints, enter **s3** in the search box.
For a Python function, choose **s3-get-object-python**.
However, the sample code provided is python2.7, we can revise it to python3.7 version later.

Under Basic information, do the following:
For **Function name**, enter your function name (ex: my-s3-function)
For **Execution role**, choose **Create a new role from AWS policy templates**.
For **Role name**, enter your role name (ex: my-s3-function-role)

Under S3 trigger, **choose the S3 bucket that you created previously**. Then, choose **Create function.**
Now, your lambda function is created, and it will be triggered automatically once AmebaPro upload an image file to the S3 bucket!
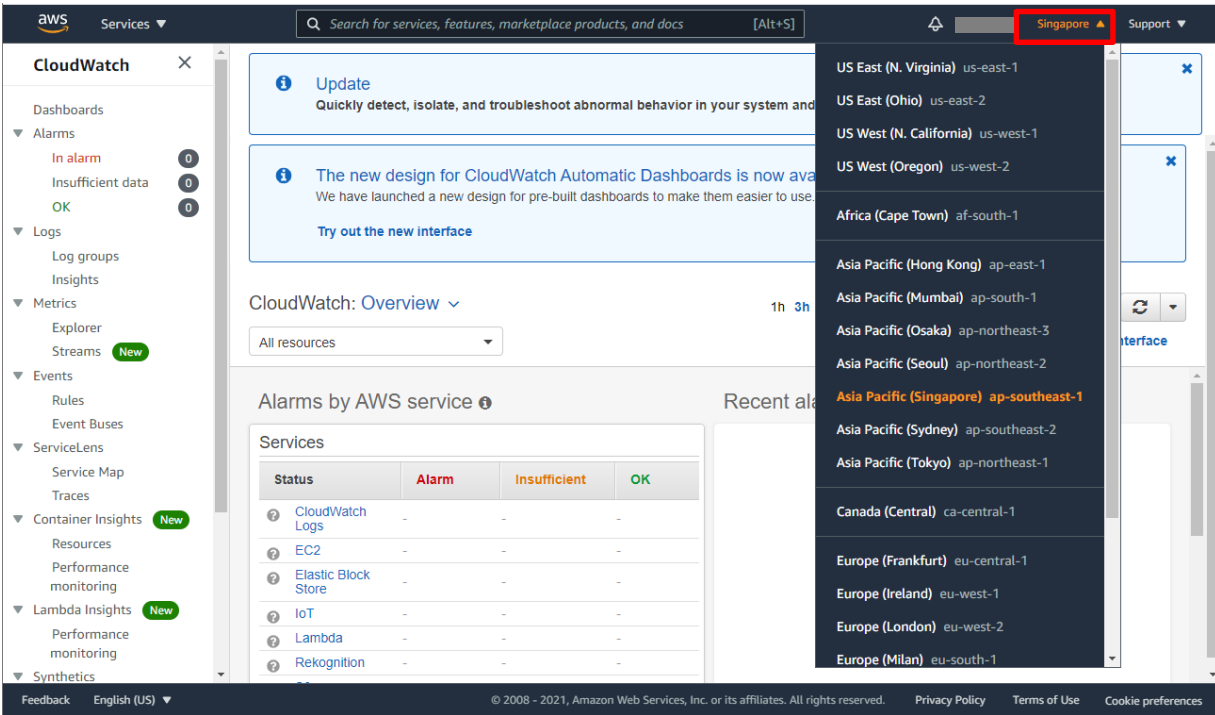

If you want to use python3.7, you can modify it as following. The sample code for food detection in python3.7 is provided along with this tutorial document: ***lambda_function.py***
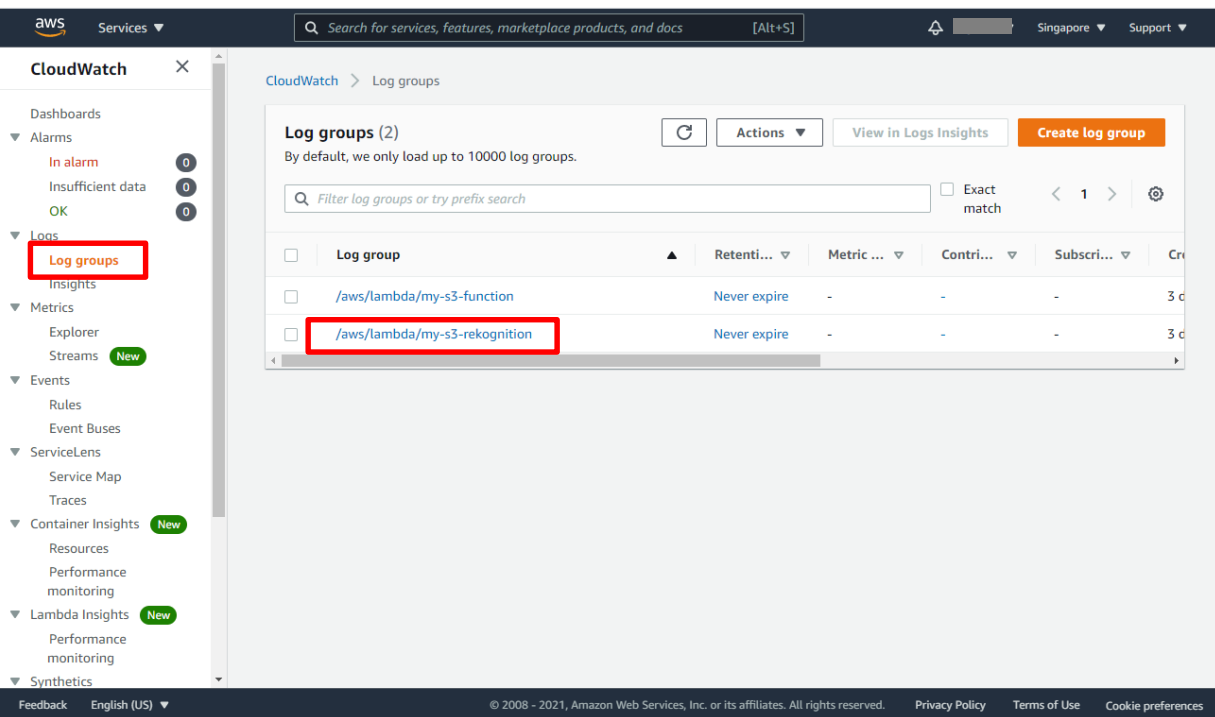

3.3   See the Object Detection Result in AWS CloudWatch

Go to AWS CloudWatch: https://console.aws.amazon.com/cloudwatch/home#
Choose the correct AWS region, our example default is **ap-southeast-1**

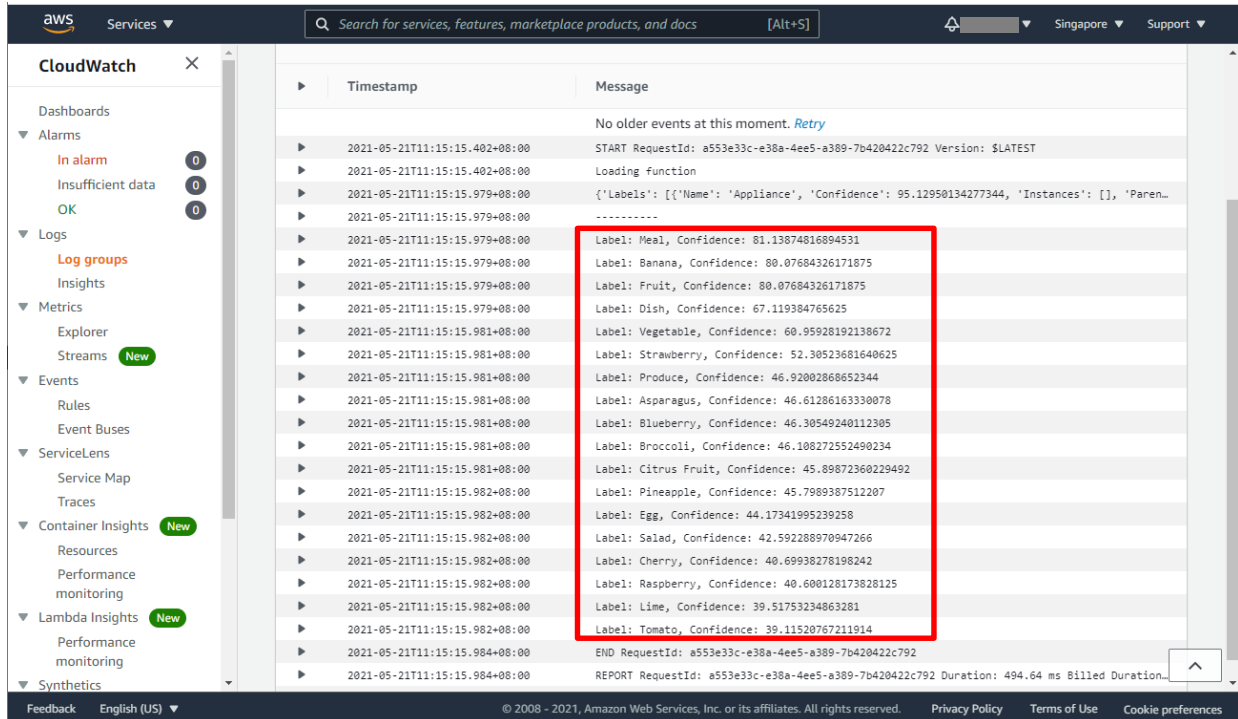

Click the Log groups button, and choose your group

Choose the latest one to see the latest result

Here is the object detection results from Rekognition!

According to AWS document, the bounding boxes are returned for common object labels such as people, cars, furniture, apparel or pets.
https://boto3.amazonaws.com/v1/documentation/api/1.9.96/reference/services/rekognition.html#Rekognition.Client.detect_labels
